

Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is actually a device constructed out of top quality materials intended to be able to withstand the most demanding operations and work environments. This particular piece of equipment enables the individual driving to be able to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the arms or the entire load in order to facilitate more exact lifting and placement in a faster and more efficient manner.

The only one of its kind fork pocket design can enable the one operating it to be able to securely swing the unit's blades without any fear of damaging the positioning cylinders. This can allow the operator the option to either perform independent or simultaneous fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into blade positioners on available units.
