

Drum Clamps

Drum Clamp - Forklifts are utilized to handle lifting, storing and moving pallets. For facilities which deal with products inside drums, you have to utilize an attachment to be able to move, lift and store them. There are various drum forklift accessories which you could get for all your drum moving, lifting and storing requirements. These attachments are specifically utilized in order to handle drum containers - therefore there is no chance of damage to the product or drum container when they are stored, moved or lifted.

Drum Positioner And Grab

The drum positioner could be used to load and unload drums off of vehicles, racks, and drum stands. These are available in three and four tine models. This particular attachment is fully automatic, hence allowing the person operating it to be able to operate all from the comfort of the lift truck seat. Able to move steel, large and extra large plastic drums, its capacity is 210 liters. This attachment is utilized for drum pyramid stacking.

The drum grab is fork mounted and is designed with the sole objective of handling steel drums which have rolling hoops. Though the purpose for the design was to handle steel drums with rolling hoops, the drum grab can accommodate the moving of large and extra large plastic drums. Drum capacity maximum is 210 liters for steel drums with rolling hoops and 220 liters for plastic drums.

The Rotator

The drum rotator is one more forklift attachment that mounts onto the blades themselves. Their purpose is to lift the drum and rotate it upside down. The drum is clamped into the drum rotator utilizing a clamp which fits around the middle of the drum. The rotation is performed by either a crank handle or a continuous loop chain. The crank handle is meant for operations which take place beneath shoulder level. For operations that must take place over shoulder level, the continual loop chain will be utilized.

The drum tines are carriage mounted or simple fork accessories. They are used for unstacking and stacking 210-liter steel drums. Stacking requires nothing fancy, merely easy horizontal placement of the drums. The carriage-mounted attachments reduce the load center of the drums.

Automatic Tongs

Drum tongs are available in automatic and semi-automatic models. They are used in the tight head or open topped steel drum styles. The drum forceps could be attached in several ways to the lift truck. One method is to attach them under a fork-mounted hook. Another way is to connect them to a fork-mounted jib or a carriage mounted jib. Both the semi automatic and the automatic have a drum capacity of 210 liters. With the automatic, there is no need for the person operating it to ever leave the seat of the lift truck.

Rim Grip Handler

When drums need storage space with limited spacing accessible, the Rim Grip Drum Handler is the perfect choice in drum forklift accessories. This particular accessory would work for either the 210 L drums in addition to 120 L drums. The Rim Grip Handler functions by using metal jaws so as to hold the rim of the drum. It picks the drum up and puts it down without requiring any space between the drums. The average model in the business is a zinc-plated handler, though, this attachment is available in stainless steel for the food and drink industry.
