

Toyota Forklift Parts

Toyota Forklift Parts - In the United States, Toyota Materials Handling inc., or TMHU, continues to be the top selling lift truck provider since 1992. This company has been headquartered out of Irvine, California for well over 40 years, offering a wide-ranging line of quality lift trucks. With an impressive reputation of stability and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the foundation of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are manufactured here.

All Toyota equipment and parts manufactured within North America adhere to the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its dedication to relentless progress and its environmentally friendly systems. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. To illustrate, the Toyota 8-Series IC lift trucks emit 70 percent fewer smog forming emissions than the current federal EPA standards and have complied with California's strict emission standards and policies.

Toyota Material Handling, U.S.A. - The Industry Leader

Brett Wood, President of TMHU, associates Toyota's success to its strong dedication to manufacture the finest quality lift trucks while delivering the utmost customer service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." • TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's largest lift truck provider and is among the magazines prominent World's Most Admired Companies.

New Meaning to Environmental Responsibility

Toyota Industries Corporation, as the parent company, has instilled a rich corporate doctrine of environmental stewardship in Toyota. Not a lot of other companies and no other lift truck producer can match Toyota's record of protecting the environment while simultaneously stimulating the economy. Environmental accountability is a fundamental aspect of company decision making at Toyota and they are proud to be the first and only manufacturer to provide UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift trucks. Yet an added reason they remain a leader within the industry.

Toyota originally introduced the 8-Series line of lift trucks in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission principles, and California's more environmentally friendly emission standards. The finished product is a lift truck that produces 70 percent less smog forming emissions than the existing Federal standards allow.

What's more in 2006, Toyota established an affiliation with the Arbor Day Foundation, furthering their responsibility to the environment. More than 57,000 trees have been planted in local parks and national forests damaged by environmental causes such as fires, as a product of this relationship. 10,500 seedlings have also been spread through Toyota Industrial Equipment's network of sellers to non-profit organizations and neighborhood consumers to help sustain communities all over the United States

Toyota's lift vehicles offer superior productivity, visibility, ergonomics and durability, and most notably, the industry's leading safety technology. The company's System of Active Stability, also called "SAS"•, helps limit the risk of mishaps and accidental injuries, and increasing productivity levels while minimizing the likelihood of product and equipment breakage.

System Active Stability is able to perceive circumstances that could lead to lateral unsteadiness and possible lateral overturn. When any of these conditions have been detected, the SAS will immediately engage the Swing Lock Cylinder to re-stabilize the rear axle. This changes the lift truck's stability trajectory from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the probability of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding strength.

SAS was first released to the market on the 7-Series internal combustion products in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS has been built-in to nearly all of Toyota's internal combustion machines. It is standard gear on the new 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped trucks in the field, along with obligatory operator instruction, overturn fatalities across all models have decreased by 13.6% since 1999. Furthermore, there have been an overall 35.5% reduction in industry wide collisions, loss of control, falls and tip overs from a lift truck for the same period.

Toyota's pattern of brilliance reaches far beyond its technological achievements. The company maintains an extensive Operator Safety Training program to help clients meet OSHA standard 1910.178. Instruction courses, video tutorials and a variety of resources, covering a wide scope of matters-from personal safety, to OSHA policies, to surface and load situations, are offered through the vendor network.

Ever since the sale of its first lift truck in the U.S. to the construction of its 350,000th lift vehicle produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has maintained an unbroken presence in the U.S. This reality is demonstrated by the statistic that 99% of Toyota lift trucks bought in America at the moment are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of property. Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service components, with the whole commitment exceeding \$113 million dollars.

The new NCC was built to operate for TMHU buyers and sellers. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live merchandise demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its creator, Sakichi Toyoda, in 1867, and finally a education center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations all through the United States, providing the most comprehensive and inclusive consumer support and customer service in the industry. The company's new and Licensed Used lift vehicles, service, components, and financing features make Toyota dealerships a one-stop shop to guarantee total customer satisfaction.
