

Carriage Rollers

Carriage Rollers - Carriage rollers are specially designed bearings that are utilized on lift masts so as to help them work in challenging environmental surroundings. Lift masts are often subjected to shocks, oscillations, vibrations and high dynamic and static loads. This equipment is often exposed to environmental influences such as dust, cold, heat, contamination, aggressive ambient air and moisture. Thus, the lift masts' guidance arrangements should be particularly robust and have a certain high load carrying capability.

To help compete in a lot of different environmental conditions, carriage rollers were designed for numerous lift masts. While having the ability to handle a particularly high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
