

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Lift trucks are quite expensive pieces of equipment because a new electric forklift model can cost starting from \$18,000 to \$25,000, for a five thousand pound machinery. Additionally, some thousands of dollars will have to be invested in a battery charger and battery. A similar internal combustion lift truck of the same lift capacity would cost a little less and the diesel units which are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned lift trucks are a choice so as to save much money for the reason that they cost less than half the price of brand new models.

Several buyers may be skeptical about purchasing a used or reconditioned lift truck because they feel they would have to spend more on upkeep. Nonetheless, a properly reconditioned forklift would be able to operate just along with a brand new one. Even if your lift will get heavy use, as long as you take proper care of the equipment, it would serve your requirements and potentially save you a lot of money.

When thinking about acquiring a used forklift, it is vital to determine what the seller means by the term refurbished or reconditioned. Lots of companies do an excellent job of totally making over the model prior to reselling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and afterward reassembling the whole thing and finishing with a fresh coat of paint.

To properly and thoroughly rebuild a forklift engine, a good business will totally disassemble it. A heat cleaning system could then be utilized to clean all the components. When this step has been done, all of the parts are checked to see if they have any breakage, any extensive wear or any defects. Certain components such as crankshafts, cylinder blocks, connecting rods and cylinder heads are resurfaced, resized and reground if necessary. Various parts such as gears, nuts, bolts etc. are repaired or replaced as considered necessary.

The engine is rebuilt by hand when the overhaul has been finished. After putting it back together, a series of tests are applied to the working machine. This is done in order to check all of the components to ensure there are no issues or leaks. If any problems occur, the needed modifications are made.

There is no reason to be alarmed about obtaining reconditioned lift trucks from quality sellers. The process the machines go through to be rebuilt guarantees the utmost reliability. Repairs costs could really work out to be less as you will avoid the initial phase of higher upkeep projections which a new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the machinery appropriately, a reconditioned forklift would serve you well.
